Terms of Use: Your use of this app is subject to adobe's General Terms (the Adobe Privacy Policy (. Don't sell my personal information: version 20.11.00 NEW• View PDFs quickly using email attachments. IMPROVED• Performance and stability. Do you have any feedback? Contact us love this app.. does wonders on iPhone and makes so much easier and easier to get through iPhone vs. computer usage. Can access most of everything on our phones now and even download and forward or send most of all the necessary documents. I can't begin to count how many times this app has been the perfect life-taker! Thank you, Adobe! No complaints here, wish for more features if they are available in every app instead of needing to open multiple apps and some bounce back and forth between them, but despite the minor inconvenience, you've still completely saved our butts tremendously several times! We'd get up! Creek out of you, so thank you once again for all the simplicity and comfort you've brought and made available on your iPhone. I use this application primarily for work purposes. I store all service receipts in this app and also fill out and send security and order forms daily. A recent update changed a lot of things. First of all, new design, I don't like. I can get used to it, but it's made it difficult to use. Some buttons aren't marked now, they only have icons, so I have to guess what they're going to do until I press them and find out if I'm right or wrong. More importantly, the functions have changed. For example, sharing a file by e-mail no longer takes the file name and automatically makes it an e-mail subject line. When sorted by name, the files that point to the letters now follow the numbers. I have to browse hundreds of files (with dates) to get into my model (which starts with letters). So I had to go through the random zero at the beginning, so it's on point. I could write more, but I understand my point. I understand it might sound like. but when you use the app as much as I do, it becomes very annoying. I'm disappointed you made such a big change, and it doesn't seem to be for the better. Let's fix this. This. I can change this back to five stars. As a subscriber to Adobe's creative cloud, I am very unhappy to see that the standard in the field of PDF software becomes practically unusable! In fact, Adobe Acrobat no longer works on iPhone XSI When I choose to download or view a PDF file, Adobe Acrobat or the Adobe Creative Cloud app appears in the list of apps to choose from in the iOS share/drop-down menu! I tried the workaround by storing the PDF file in files both locally and through an iCloud drive, and then tried to open the saved PDF through Adobe Acrobat, which credibly failed to open with a message that said File type not supported... This is unacceptable! Adobe Acrobat cannot open a file format that aims not only to open but also to create and manage! Wow, wow! Not sure what's going on, but Adobe is lazy with other apps too! I'm considering canceling a CC subscription because \$50 a month is a price worth paying just for the best, and I literally see more and more apps offering more! Mobile apps are terrible besides a few others! All in all, I never thought Acrobat would ever lose a crown, but here I have to find an alternative to save the PDF I need! Verbal apologies do not change the fact that I share money from software that does not work properly! The symptoms I described sound very much like you don't have a PDF or the PDF you're trying to open is invalid. This would explain both why it doesn't appear in the share menu and why it doesn't open from files. What I'm describing is meant to work. If you're having trouble, please contact us at Would like to hear more about how you try to open the file and get a copy of the file itself. Thank you!
